

DHREETIMAN PRASAD

Software Developer | AI / Backend Engineer

Vadodara, Gujarat, India

☎ +91-6200391420 ✉ dhreetiman09999@gmail.com [in linkedin.com/in/dhreetiman-prasad/](https://www.linkedin.com/in/dhreetiman-prasad/) github.com/Dhreetiman

Professional Summary

- Backend and AI engineer with 3+ years architecting and owning production systems in Node.js and Python (FastAPI). Builds scalable microservices and LLM-powered features using RAG, vector search, and OpenAI, and re-engineered high-traffic services to cut API response times by **up to 89%**. Leads backend delivery end to end — driving architecture decisions, mentoring engineers through code reviews, and turning ambiguous client requirements into reliable, high-performance products.

Technical Skills

Languages: JavaScript, TypeScript, Python, SQL, HTML/CSS

Backend & Frameworks: Node.js, Express, Nest.js, FastAPI, Sequelize.js

AI / ML: RAG, Vector Databases (Pinecone, Qdrant), Embeddings, Fine-tuning, Prompt & Context Engineering, LangChain / LangGraph, OpenAI API, HuggingFace, PyTorch, Scikit-learn, Pandas

Databases: PostgreSQL, MongoDB, MySQL, Redis

DevOps & Cloud: AWS (EC2, Lambda, S3), Docker, Jenkins, NGINX, Kafka, CI/CD

Tools & Protocols: Git, Postman, JIRA, WebSocket, OCPP, Prometheus, Grafana, Mocha

Experience

Eliteware Solutions

Oct. 2023 – Present

Software Engineer

Vadodara, Gujarat

- Architected and led backend development for **Klimates**, a carbon-accounting SaaS, designing a **9-service** microservices architecture across Node.js/Express and Python/FastAPI that powers automated emissions tracking and reporting.
- Optimized PostgreSQL query design, indexing strategy, and data-access patterns across the analytics layer, **cutting API response times by up to 89%** — bringing the heaviest endpoints from over 5 seconds to under 1 second, with no change to output.
- Built an AI-driven emission-classification engine in Python/FastAPI using **OpenAI GPT-4o** and a **RAG** pipeline with **Pinecone** vector search, automatically mapping transaction data to the correct emission categories.
- Engineered real-time, bidirectional communication between EV chargers and backend services using the **OCPP** protocol over **WebSocket**, enabling live charger monitoring, session tracking, and remote start/stop control.
- Led cross-functional development teams across multiple products — owning technical direction, code reviews, and feature delivery — while serving as the primary client contact for requirements and progress updates.
- Championed AI-assisted development across the team — integrating tools like Claude and Codex into engineering workflows and training interns to apply them for task automation — accelerating delivery on complex engineering work.

Kavara Tech

May 2023 – Sep. 2023

Backend Developer

Noida, Uttar Pradesh

- Designed and shipped backend features and REST APIs for cloud-based applications, contributing directly to the engineering team's delivery roadmap.
- Implemented server configuration and automated deployment workflows, streamlining the release process and improving build reliability.
- Authored test cases and resolved production issues alongside senior engineers, raising code quality and reducing recurring bugs.

FunctionUp

Sep. 2022 – May 2023

Software Developer Intern

Remote

- Built and shipped features for booking and e-commerce web applications, contributing across the stack from REST API design to database integration.
- Built a strong foundation in software engineering — REST API design, relational data modeling, and version control — through intensive, project-based development.

Personal Projects

Multi-Agent Research Assistant | *FastAPI, OpenAI, LangGraph, Qdrant, Redis, Docker* **2025**

- Built an AI multi-agent research platform with **six specialized agents** (research, web search, summarization, fact-checking, citation, report generation) orchestrated via **LangGraph**.
- Implemented a **RAG** pipeline with **Qdrant** vector search, PDF ingestion, and document memory, served by an async **FastAPI** backend with **WebSocket** token streaming and citation-aware generation.

AI API Gateway | *FastAPI, Redis, PostgreSQL, Prometheus, Grafana, Docker, NGINX* **2025**

- Engineered a production-grade gateway routing requests across multiple LLM providers, with intelligent model selection, token/cost tracking, rate limiting, and API-key authentication.
- Added Redis response caching with retry and provider fallback for high availability, and integrated Prometheus/Grafana observability for request tracing and latency/error metrics.

Openwave | *Node.js, Express, TypeScript, Socket.IO, Prisma/PostgreSQL, AWS S3, Next.js* **2025**

- Built the backend for a programmer social platform — **68 REST endpoints** in TypeScript/Express, **Socket.IO** real-time chat, and code execution across **13 languages** via the Piston API.
- Modeled 17 entities (profiles, coding challenges, submissions, posts, conversations) in Prisma/PostgreSQL with AWS S3 presigned uploads; Next.js frontend in progress.

Education

Assam Down Town University

B.Sc. in Information Technology

June 2019 – July 2022

Guwahati, Assam
